

eYRC 2021-22: Agri Bot (AB)

Simple Action Server and Client

- If you are going to have an application in which the Action Server is going to handle only goal at a time then Simple Actions are more appropriate in that case.
- A Simple Action Server can handle only one goal at a time.
- When a new goal arrives Simple Action Server will cancel the current goal and accept new goal.
- Simple Action Client will only track one goal, the latest one sent to the server.
